

GENERAL INFO

WATER SOFTENER CLEANER

Puretec SoftenerSafe

A water softener is the perfect solution for scaling and spotting in your home. It makes it easier to clean your car, clothes, shower screen and even more - but what's keeping your softener clean? SoftenerSafe!

SoftenerSafe is a media cleaning powder made with natural premium citric acid specially formulated to release contaminants from resin. Enhance the performance of your water softener by removing clogging and build-up of iron, organics and other contaminants from the softener resin.

DIRECTIONS:

Add 1/2 cup (115g) of SoftenerSafe per 25 kg of salt in the Brine Tank to 1 L of warm water and allow to dissolve. Then pour the solution into the salt in the brine tank. Put the water softener into manual regeneration. Repeat periodically as necessary, the frequency is dependent on the level of contaminant fouling the resin.
